                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        "ICEBERG: a novel inhibitor of interleukin-lbeta generation.";
Cell 103:99-111(2000).
-!- FUNCTION: INHIBITS GENERATION OF IL-1BETA BY INTERACTING WITH
CASPASE-1 AND PREVENTING ITS ASSOCIATION WITH RIP2.
-!- TISSUE SPECIFICITY: PRIMARILY EXPRESSED IN THE HEART AND PLACENTA.
-!- SIMILARITY: CONTAINS I CARD DOMAIN.
                                                                                                                                                                                 "Complete sequence analysis of the genome of the bacterium Mycoplasma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                        Nucleic Acids Res. 24:4420-4449(1996).
-!- FUNCTION: Binds directly to 16S ribosomal RNA (By similarity).
-!- SIMILARITY: BELONGS TO THE S20P FAMILY OF RIBOSOMAL PROTEINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
